DOCKER - COMPOSE

10101000101 10101000101 10100010101

1 Configure o seu container

dockerfile

2 Crie a lista de serviços

docker-compose.yaml

docker-compose up

Crie o arquivo dockerfile que vai representar a sua imagem.

Crie o arquivo docker-compose com a lista dos serviços que serão executados em conjunto com o seu container.

Execute o contêiner com o comando docker-compose up

0100010101000

3 Execute o compose

```
DOCKER - COMPOSE
```

```
1010100010101

DOCKER – COMPOSE

1010100010101

- c:> docker-compose up
- c:> docker-compose up [nome do serviço]
- c:> docker-compose up -f [arquivos para sobrescrita / merge]

Executa os serviços especificados no docker-compose.yaml.
